HIGH PERFORMANCE, DUAL BAND (2.4/5GHZ) DEVICE FOR WI-FI CONNECTIVITY

PremierWave® XN is a multi-port device server that offers high performance Ethernet or Wireless connectivity for remote access and easy management of machines or equipment over the network and across the Internet.

PremierWave XN provides bullet-proof security by offering robust data encryption and authentication options including AES, SSH and SSL. Remote configuration over a network is possible using Telnet, SSH, or web browser (HTTP and HTTPS).

Equipped with the market leading "Lantronix device server application suite", the PremierWave XN provides control of serial communication on connected devices and the flexibility to have data globally available. Advanced Applications Suite includes: basic & secure tunneling application, web-based configuration manager and robust system level and diagnostic utilities.

Additionally, Lantronix' proprietary Secure ComPort Redirector™ software allows existing serial port applications to work without code modifications.

Designed with 802.11n technology, the PremierWave XN employs antenna diversity for optimal wireless performance, signal reliability, and extended range of wireless transmissions.

With the exclusive SmartRoam technology from Lantronix, the PW-XN provides seamless mobile connectivity. By tracking the signal strength of Access Points (AP) within range along with pre-authentication and caching, smooth and automatic transition to an access point occurs without delay.

Configuration of PremierWave XN is simple with the included Windows-based DeviceInstaller.™ With the Lantronix QuickConnect Manager, PremierWave XN provides an easy connection to the wireless network through a Web-based interface.

PremierWave XN Highlights:
